2023 Highlight Vehicle Industry Trends

The new member of the lightweight chassis zero carbon emission CHENGLONG H5V has arrived !

As a hydrogen powered cargo vehicle for the future, the powertrain of this Chenglong H5V is its biggest highlight. The vehicle is equipped with a K05 hydrogen internal combustion engine with a power of 125kW. The engine uses advanced electronic control system and Common rail technology to achieve efficient hydrogen injection and mixing, making its thermal efficiency as high as 43%.

Hydrogen internal combustion engines are not actually new, and their structure is similar to natural gas engines, with lower requirements for hydrogen purity (95%), reducing the cost and difficulty of hydrogenation. Relying on the efficient and clean characteristics of hydrogen, it has advantages such as low ignition energy, fast flame propagation speed, high unit heat value, and no carbon emissions in combustion products, which is in line with the national advocacy for low-carbon and clean energy. And compared to hydrogen fuel cell trucks, hydrogen internal combustion engines are more suitable for operating under high load conditions, suitable for heavy-duty, unpaved roads, construction and other fields.

In terms of hydrogen storage, the Compressed hydrogen aluminum liner carbon fiber fully wound gas cylinders of the vehicle are arranged on both sides of the girder. The aluminum alloy liner has good corrosion resistance and fatigue resistance, while the carbon fiber composite shell has high strength and other characteristics, which can provide sufficient structural support and protection.

The new member hydrogen internal combustion engine cargo vehicle of the Chenglong H5V not only achieves zero carbon emissions, but also has lightweight chassis, efficient power, luxurious configurations, etc., bringing cardholders a new driving experience and transportation mode for the future. For card enthusiasts, if you want to try a new energy method and enjoy a more efficient, comfortable, and intelligent transportation process, then the Citroen H5V hydrogen internal combustion engine 6 × A 2 truck would be a good choice.

- A newly-designed loading page has been applied to Standard SPA Catalogues
- We were awarded EcoVadis Sustainability silver medal for 2023
- We were popular at China Automobile Parts Fair

A newly-designed loading page has been applied to Standard SPA Catalogues

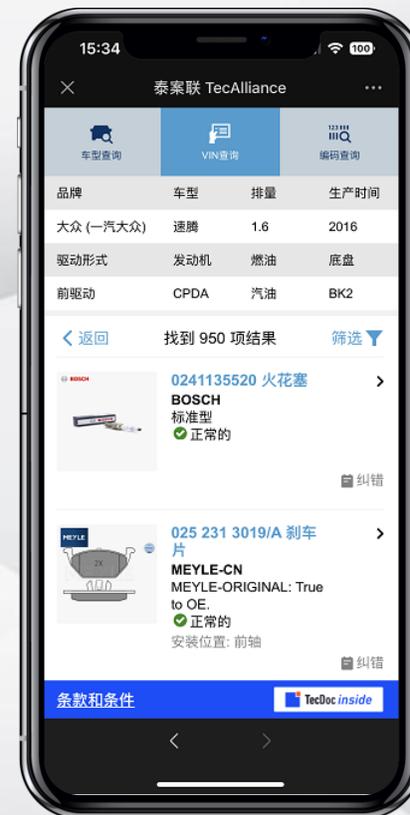

Our Standard SPA Catalogue is a vehicle & replacement parts search platform specially created for mobile ends. It does not only contain the comprehensive and accurate data and information of TecDoc Web Catalogue, but also supports those flexible functions on mobile devices, allowing workshops, dealers, sellers, and car owners to search for their needed parts anytime and anywhere. SPA Catalogue can deliver efficient user experience and thus lead to a remarkable sales increase at this Point of Sale.

While using TecDoc SPA Catalogue on mobile handsets, tablets, or other portable devices, users can identify the VIN code on a photo directly with the built-in OCR, so as to save time of manual input and reduce errors significantly. At present, after users take a snap and upload the photo of VIN code, a brand-new loading page will pop out, which will last until the results are presented. This update aims to pacify the anxiety of users waiting for OCR processing, improve user experience, and enhance their confidence in using the Catalogue.

This update applies to both our official TecDoc SPA Catalogue and customized brand SPA Catalogues. The demonstration of this new feature starts next slide.

Scan the QR code, follow our WeChat account and try out TecDoc SPA Catalogue!

1. Follow our WeChat account: tecalliance. Enter the SPA Catalogue. Click “VIN”. Click the camera icon on the left and click “Photo Library”, “Take Photo”, or “Choose File” to select the targeted VIN photo.

2. Edit, adjust, and upload VIN photo.

3. After the uploading step, a new loading page will appear, indicating that the photo is being processed by OCR.

4. When VIN identification is successfully completed, users will be led to the results page automatically.

We were awarded EcoVadis Sustainability silver medal for 2023

We have again achieved the silver medal in this year's EcoVadis sustainability rating. This puts us in the top 25 of the more than 100,000 companies evaluated worldwide. We were once again able to improve compared to the previous year. The external evaluation underpins the credibility of our commitment to sustainability and confirms us as a reliable and responsible partner in the global automotive aftermarket.

EcoVadis is the world's largest provider of sustainability ratings for companies. Many of our partners and customers demand transparency for their supply chains with regard to sustainability and corporate social responsibility (CSR). The high rating from the external, internationally recognised rating specialist proves the success of the numerous measures that we have implemented in recent months. These include the introduction of a Global Code of Conduct that sets uniform standards for the behaviour of our employees and business partners worldwide. In addition, we have implemented a whistleblowing system to report and uncover potential violations of the Code of Conduct.

Another important tool for us to improve sustainability is the assessment of sustainability risks from our suppliers. Furthermore, we have implemented comprehensive measures to save CO2 and have set ourselves the goal of being CO2-neutral by 2030. E-learning courses and workshops for our teams have been introduced to raise awareness of sustainability and CSR.

We were popular at China Automobile Parts Fair

In the Spring City of Kunming in China, the 93rd China Automobile Parts Fair (CAPF) welcomed both domestic and overseas visitors, starting from April 27th. In our booth, we met with customers face to face on site. After getting hold of their daily operating situation, our professional sales team introduced our service portfolio in detail and proposed customized “solution packages” for meeting their business goals.

This year is all about making us more visible, and we were glad to find out that some customers paid a special visit to us after reading our exhibition announcement on WeChat (our account ID is tecalliance). They came to us with certain requests, believing that we have the high quality data and solutions that meet their expectation, just as one of our customers put it: “I’ve tried data provided by another company, which was far from satisfactory. Today in TecAlliance’s booth, I feel happy to talk directly and solve problems all together here.”

Company News

CAPF marks the beginning of our exhibition season on Chinese Mainland. Our fully-mobilized team made comprehensive preparation for the show to receive customers, both old and new, to look for the potential of deeper cooperation.

We met dozens of visitors on a daily basis, and “going global” was one of the hotspot topics. After the global pandemic situation, Chinese enterprises were enthusiastic about expanding export business and succeeding in overseas markets, especially Southeast Asia, Middle East, Europe, and North America. Luckily, we got them all covered: with our foothold on every major continent, our locally hired team specialized in local markets, and our specially designed data sets and digital solutions applicable to different countries and regions, we make your global business sail fast and safe. If you are worrying about how to launch products in a new market, let us help you analyze and guide your first step with
